Restriction/election

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 34-36, drawn to a system for a color output apparatus, classified in class 358, subclass 1.9.
- II. Claims 1-33 drawn to a test chart color measuring system for extracting the color of a test chart, classified in class 382, subclass 162.

Inventions are related as combination/subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination I as claimed does not require the particulars of the subcombination as claimed because I does not require particular structures of a test chart measuring system. The subcombination II has separate utility such as extracting image signals corresponding to color samples and calculating a color value of each extracted sample using the extracted image signal.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2623

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).
